

Senior Acoustics Consultant Melbourne

Our specialist acoustics team works on projects throughout the world, from their bases in Australia and the UK. The team provide consultancy services to clients both independently and as part of a co-ordinated multi-disciplinary offering on larger projects.

The Role

We are looking for a Senior Consultant who can bring a wealth of experience, drive, and technical expertise to our existing team of acoustics specialists. You will take responsibility for acoustic input on a wide range of built environment engineering projects and will provide management and supervision to projects and team members.

As a leading source of expertise, your input at design meetings and providing of clear advice to clients, architects, and engineers (internal and external) on design issues relating to acoustics, noise and vibration will be crucial.

The technical duties will include preparing and overseeing fee proposals for acoustics, noise and vibration assessments, sound management programmes and design specifications, which includes liaising with clients, acquisition and collation of data, computer modelling, noise and vibration monitoring, noise and vibration measurements, calculations and processing of results, interpretation of data, and production of reports, drawings, figures and tables.

Good working knowledge of acoustic materials for reverberation control and detailing of construction elements (particularly partitions, ceilings, mullions etc.) will be beneficial.
