

review so late as the Conference will have been two years previous by the time the reader has ordered his copy. Nevertheless there is a mount of information in these proceedings some of which will not date for years to come. For the postpaid price of \$US42 there are some 470 pages containing 52 technical papers mostly of an applied and specialised nature. There are papers in the usual well catered fields such as orifice noise, fan noise, but also in the less referred areas e.g. printers. Some papers are very specialised and may only have relevance to one-off consulting problems e.g. predicting noise from printer linkage mechanisms. A list of the technical sessions titles with the number of papers in each is given — Valves and Orifices (5); Printers and Other Mechanisms (6); Structural Design and Other Source Quieting (8); Fans and Turbomachines (7); Air Conditioners, Fans (8); Motors and Transformers (8); Tire Road Interaction, Burners and Combustors (6); Industrial Forming Machines (4).

—John Dunlop

INDEX

Volume 12 1984

Format: Author, issue, first page, title.

A. ARTICLES

BULLEN R., No. 3, p. 75

The effects of aircraft noise: current knowledge and future research directions.

BURGESS M., No. 2, p. 51

Traffic flow and noise levels at one site.

CADDY R., No. 1, p. 20

Self-calibration of your microphone and sound level meter.

DUBOUT P., No. 3, p. 94

Standards for accuracy in environmental acoustics.

DUNLOP J., No. 1, p. 12

The acoustics of the Alemba.

HALL M., No. 2, p. 35

Underwater acoustics in Australia.

HALL M., No. 2, p. 47

Some effects of correlation between environmental parameters on the distribution of acoustic propagation loss in the ocean surface-duct.

HEDE A. J., No. 3, p. 81

Factors determining traffic noise annoyance.

HENDERSON M., No. 1, p. 9

The discovery of a new musical sound.

MILBURN J. A., CROMBIE D. S., No. 1, p. 15

Sounds made by plants—a novel application of acoustic emission analysis.

OLDHAM D. J., No. 3, p. 89

Future trends in environmental and building acoustic measurements.

PENROSE J.D., WHITE B. A.,

PALUMBO D., WELLS J. B.,

COLLINS L. B., No. 2, p. 39

Monte Carlo modelling of scattering in underwater acoustics.

B. REPORTS

CADDY R., No. 1, p. 23

Recorded waveforms in LP disks.

CATO D., No. 2, p. 54

Current RANRL research on noise from wind and wave action at the sea surface.

CHENKO G., No. 3, p. 100

An industrialist's view on community noise legislation.

FRICKE F., No. 2, p. 45

An appreciation of Jack Rose's contribution to acoustics.

GIFFORD K. H., No. 3, p. 80

Noise: problems and remedies.

KEWLEY D. J., No. 2, p. 55

Underwater acoustics research in the Marine Studies Composite.

LANE I., No. 3, p. 99

Entertainment noise control and development of a draft state environment protection policy.

LAWRENCE M. W., No. 2, p. 57

Acoustic deep ocean bottom experiment.

STOWE B. P., No. 3, p. 87

Noise control — a local government perspective.

WILKINS P. A., No. 3, p. 93

New hearing conservation regulations in W.A.
